

# Value Partners Greater China High Yield Income Fund

NAV per unit: Class P Acc USD - USD15.83 | Class P MDis USD - USD6.84

Fund size : USD2,508.6 million

June 2021

- Value Partners Greater China High Yield Income Fund (the "Fund") primarily invests in a portfolio of fixed and floating rate bonds and other debt securities, including convertible bonds, in the Greater China region.
- The Fund may invest in high yielding securities which may be unrated or below investment grade and debt securities issued by special purpose vehicles. The Fund is therefore exposed to higher credit/insolvency risk and default risk.
- The Fund primarily invests in the Greater China region and therefore is subject to emerging market and concentration risks. Generally, investments in emerging markets are more volatile than investments in developed markets due to additional risks relating to political, social, economic and regulatory uncertainty. Adverse development in such region may affect the value of the underlying securities in which the Fund invests.
- In respect of the distribution shares for the Fund, the Manager currently intends to make monthly dividend distribution. However, the distribution rate is not guaranteed. Distribution yield is not indicative of the return of the Fund. Distribution may be paid from capital of the Fund. Investors should note that where the payment of distributions are paid out of capital, this represents and amounts to a return or withdrawal of part of the amount you originally invested or capital gains attributable to that and may result in an immediate decrease of the net asset value per share of the Fund.
- The Fund may also invest in derivatives which can involve material risks, e.g. counterparty default risk, insolvency or liquidity risk, and may expose the Fund to significant losses.
- You should not make investment decision on the basis of this marketing material alone. Please read the explanatory memorandum for details and risk factors.

## Investment objective

The Fund aims to provide capital appreciation by primarily investing in Greater China debt securities, including but not limited to high yield, convertible and mainland Chinese offshore bonds.

## Commentary

### Portfolio review:

US Treasuries rallied in June, benefiting investment grade bonds in Asia. China property high yield names, however, weakened and continued to suffer from headline risks. On the flipside, non-China property Asian high yield issues were stable and supportive. For the month, we trimmed down our China property exposure in favor of industrial names. We also took the opportunity to rotate within the property sector, from high-beta names into more benchmark ones.

### Outlook:

Even with the Fed reiterating that it will keep rates low in the foreseeable future, the possibility of much higher inflation and an earlier-than-expected Fed tapering continues to be a hot topic. Market sentiment also correlates with the Covid situation. With the abundant amount of cash and uncertain outlooks in rates, quantitative easing and the pandemic, we view that the market is now in a wait-and-see mode. However, we believe long term yields will likely rise gradually as recovery takes shape, resulting in a steeper yield curve. It is therefore important to pay attention to the pace of the US recovery, its inflation rate and job numbers. The efficacy of the vaccines and the global pandemic situation will also have great implications for the pace and path of the current recovery.

Source: HSBC Institutional Trust Services (Asia) Limited and Bloomberg, data as at the last valuation date of the month as stated above, unless stated otherwise. Performance is calculated on NAV to NAV in base currency with dividend reinvested and net of fees. All indices are for reference only. Our portfolio disclosure policy can be obtained from the Investment Manager upon request to email [fis@vp.com.hk](mailto:fis@vp.com.hk).

1. Each hedged share class will hedge the Fund's base currency back to its currency of denomination on a best efforts basis. However, the volatility of the hedged classes measured in the Fund's base currency may be higher than that of the equivalent class denominated in the Fund's base currency. The hedged classes may be suitable for investors who wish to reduce the impact of changes in exchange rates between their local currency and the Fund's base currency. 2. The manager intends to declare and pay monthly dividends equal to all or substantially all of the net income attributable to each of the Distribution Classes. However, there is neither a guarantee that such dividends will be made nor will there be a target level of dividend payout. No dividends will be paid with respect to the Accumulation Classes. Distribution may be paid from capital of the Fund. Investors should note that where the payment of distributions are paid out of capital, this represents and amounts to a return or withdrawal of part of the amount that have been originally invested or capital gains attributable to that and may result in an immediate decrease in the value of units. Please refer to the Explanatory Memorandum for further details including the distribution policy. 3. Annualized yield of MDis Class is calculated as follows: (Latest dividend amount/NAV as at ex-dividend date) x 12. Investors should note that yield figures are estimated and for reference only and do not represent the performance of the Fund, and that there is no guarantee as to the actual frequency and/or amount of dividend payments. 4. Only debt securities including convertible bonds are stated in the top holdings table. 5. Classification is based on Global Industry Classification Standard (GICS). 6. Volatility is a measure of the theoretical risk in terms of standard deviation, based on monthly return over the past 3 years. 7. Investors should note that the Yield to worst figure is for reference only and does not represent the actual performance of the Fund or the dividend yield received by investors. A positive yield does not imply a positive return. 8. Exposure refers to net exposure (long exposure minus short exposure). Derivatives e.g. index futures are calculated based on P/L instead of notional exposure. 9. Cash includes receivables and payables (except cash for collaterals and margins). 10. Including bonds whose issuers do not seek credit ratings (Greater China Paper: 13.9%; Equity-linked investments 7.6%; Loan 4.1%; Others 1.8%). 11. The letter rating, which may be based on bond ratings from different agencies, is provided to indicate the average credit rating of the portfolio's underlying investments without taking into account derivative positions. Issuer rating may be used for unrated securities. The average credit rating is determined by assigning a sequential integer to all credit ratings from AAA (highest) to D (lowest), taking a simple, asset-weighted average of debt holdings by market value and rounding to the nearest rating. As the risk of default increases disproportionately as a bond's rating decreases, the simple weighted average of credit ratings is not a statistical measurement of the portfolio's default risk. 12. The assessment of each award category is based on 3 weighted criteria, and one weighted criterion based on feedback from private banking fund selectors. The weightings includes product performance (30%), asset gathering (20%), service competency/quality (20%) and fund selector feedback (30%). 13. The awards recognize the top performing Greater China Fixed Income funds issued by CAMAIHK members with at least 1 year of historical performance as of 30 Sep 2020. 14. The Best Total Return calculation methodology, Bloomberg calculates the customized 1 year, 3 years and 5 years total return using Bloomberg calcroute field "RT095-Custom Total Return Holding Period". 15. The award reflects performance up to 31 Dec 2019. 16. For Hong Kong investors only. The views expressed are the views of Value Partners Hong Kong Limited ("VPHK") only and are subject to change based on market and other conditions.
