

Value Partners Greater China High Yield Income Fund

NAV per unit : Class P USD Acc - USD9.56 | Class P USD MDIs - USD3.79
Fund size : USD895.5 million

May 2022

- Value Partners Greater China High Yield Income Fund (the "Fund") primarily invests in a portfolio of fixed and floating rate bonds and other debt securities, including convertible bonds, in the Greater China region.
- The Fund may invest in high yielding securities which may be unrated or below investment grade and debt securities issued by special purpose vehicles. The Fund is therefore exposed to higher credit/insolvency risk and default risk.
- The Fund primarily invests in the Greater China region and therefore is subject to emerging market and concentration risks. Generally, investments in emerging markets are more volatile than investments in developed markets due to additional risks relating to political, social, economic and regulatory uncertainty. Adverse development in such region may affect the value of the underlying securities in which the Fund invests.
- In respect of the distribution shares for the Fund, the Manager currently intends to make monthly dividend distribution. However, the distribution rate is not guaranteed. Distribution yield is not indicative of the return of the Fund. Distribution may be paid from capital of the Fund. Investors should note that where the payment of distributions are paid out of capital, this represents and amounts to a return or withdrawal of part of the amount you originally invested or capital gains attributable to that and may result in an immediate decrease of the net asset value per share of the Fund.
- The Fund may also invest in derivatives which can involve material risks, e.g. counterparty default risk, insolvency or liquidity risk, and may expose the Fund to significant losses.
- You should not make investment decision on the basis of this marketing material alone. Please read the explanatory memorandum for details and risk factors.

Investment objective

The Fund aims to provide capital appreciation by primarily investing in Greater China debt securities, including but not limited to high yield, convertible and mainland Chinese offshore bonds.

Commentary

Portfolio review:

US Treasury yields stabilized in May, with the 10-year yield benchmark trading mostly between 2.7% to 3.0% during the month. On the back of a stable US Treasury, Asian investment grade credits were steady. However, Asian high yield credits underperformed as a few credit incidents, particularly an issuer in the Chinese property sector with an SOE background announcing an unexpected debt extension, hit the market by surprise. Our fund does not hold a position in the aforementioned SOE-related issuer. For the month, we continued to risk manage our exposure to China property. Meanwhile, we added to the Indian renewable and resources sectors. In the current challenging environment, our priority remains to manage the quality and liquidity of our holdings.

Outlook:

We continue to hold a cautious view of the China property sector. We continue to look for clues and evidence of concrete government support measures and their impacts on the sector. The surprise incident of the SOE-related issuer once again reminds us that the market is full of idiosyncratic events and negative surprises and, therefore, sporadic volatility should be expected. We will continue to monitor the market and will act accordingly.

Fund documents Fund notices

Source: HSBC Institutional Trust Services (Asia) Limited and Bloomberg, data as at the last valuation date of the month as stated above, unless stated otherwise. Performance is calculated on NAV to NAV in base currency with dividend reinvested and net of fees. All indices are for reference only. Our portfolio disclosure policy can be obtained from the Investment Manager upon request to email fis@vp.com.hk.

1. Each hedged share class will hedge the Fund's base currency back to its currency of denomination on a best efforts basis. However, the volatility of the hedged classes measured in the Fund's base currency may be higher than that of the equivalent class denominated in the value of units. Please refer to the Explanatory Memorandum for further details including the distribution policy. 2. Annualized yield of MDis Class is calculated as follows: (Latest dividend amount/NAV as at ex-dividend date) x 12. Investors should note that yield figures are estimated and do not represent the performance of the Fund, and that there is no guarantee as to the actual frequency and/or amount of dividend payments. 3. Only debt securities including convertible bonds are stated in the top holdings table. 4. Classification is based on Global Industry Classification Standard (GICS). 5. Volatility is a measure of the theoretical risk in terms of standard deviation, based on monthly return over the past 3 years. 6. The weighted modified duration represents the average modified duration of the portfolio of the underlying bonds weighted by reference to their market value. 7. Investors should note that the Yield to worst figure is for reference only and does not represent the actual performance of the Fund or the dividend yield received by investors. A positive yield does not imply a positive return. 8. Exposure refers to net exposure (long exposure minus short exposure). Derivatives e.g. index futures are calculated based on P/L, instead of notional exposure. 9. Cash includes receivables and payables (except cash for collaterals and margins). 10. The highest credit rating assigned by one of the three major external agencies (S&P, Moody's or Fitch) will be used for fixed income securities. Issuer rating may be used for unrated securities. 11. Including bonds whose issuers do not seek credit ratings (Greater China Paper 15.1%, Equity-linked Investments 7.2%, Loan 1.5%, Others 4.8%). 12. The weighted average credit rating is derived by taking the weighted average of the credit rating for each underlying bond in the portfolio. Issuer rating may be used for unrated securities. The average credit rating is determined by assigning a sequential integer to all credit ratings from AAA (highest) to D (lowest), taking a simple, asset-weighted average of debt holdings by market value and rounding to the nearest rating. As the risk of default increases disproportionately as a bond's rating decreases, the simple weighted average of credit ratings is not a statistical measurement of the portfolio's default risk. 13. The assessment of each award category is based on 3 weighted criteria, and one weighted criterion based on feedback from private banking fund selectors. The weightings include product performance (30%), asset gathering (20%), service competency/quality (20%) and fund selector feedback (30%). 14. The awards recognize the top performing Greater China Fixed Income funds issued by CAMA/HC members with at least 1 year of historical performance as of 30 Sep 2020. The Best Total Return calculation methodology: Bloomberg calculates the customized 1 year, 3 years and 5 years total return using Bloomberg calcroute field "RT09S-Custom Total Return Holding Period". 15. The award reflects performance up to 31 Dec 2019. 16. For Hong Kong investors only.
