

Contract: Enterprise Application Developer

Value partners is currently revamping its back end operational and reporting systems and is seeking experienced application developers to help us roll out a new in-house developed system over the next year.

At this stage in the project, our principal focus is to rapidly transition business reporting and user interface functionality from our legacy system to the new system.

We are therefore looking for a small number of coders who can help us with the migration.

As a contractor we will expect you to be delivery focused, capable of working independently and, where appropriate, have the experience to help guide our more junior staff in more complex engineering scenarios.

We will expect you to have been coding for at least 7 years and to have had substantial involvement in at least one new system development. Your technical skills will include:-

- Coding business reports using an enterprise grade report writing suite (Microsoft SQL Server Reporting Services or equivalent);
- SQL databases (Microsoft SQL Server or equivalent)
- Webservice development (preferably ASP.NET Web API 2)
- Experience in writing robust, quality code (preferably in C#).
- Experience in developing web based user interfaces would be a substantial plus.

We would prefer to engage individuals who have a Financial Services background (Securities Services, Fund Management, Brokerage or Banking), but will consider you if you can demonstrate familiarity with finance operations in other industries.

Interested candidates please send your full resume with current and expected salary in **MS Word format** at career@vp.com.hk. Personal data will be used for recruitment purpose only.

Only shortlisted candidates will be notified.
